

## Top Tips for Using Safety Harnesses and Lanyards in MEWPs

When working in a boom-type platform, it is strongly recommended that your lanyard is short enough for the operator to be restrained within the platform.

Do not rely solely on your safety harness and lanyard to keep you safe.

The furthest operators should be reaching is arm's length.

Keep both feet on the floor at all times.

Stay inside the platform at all times. Do not stand on the guardrails and lean over.

Before manoeuvring, make sure operators carry out all required observations.

Plan tasks thoroughly and complete a risk assessment.
